

Palisade fencing

Palisade is widely acknowledged as the industry's leading product for protecting against intrusion and deterring all types of general attack at the perimeter boundary.

Paramount Palisade is manufactured with industry-leading technology to ensure a long trouble-free life whilst protecting the assets contained within the premises it has been installed to protect.

Available in a wide range of specifications, offering protection for differing levels of perceived security risk, our range starts from our low risk specifications designed for demarcation, and rises to our highest security version, Portcullis. We offer a Palisade security fence suitable for all applications.

- ✓ Optional design to BS1722 Part 12 (GP) and (SP)
- ✓ Galvanised to BSEN ISO1461
- ✓ Available in component form or ready assembled welded panels
- ✓ Special panels or posts can be manufactured to suit specific client specifications. Including cranked versions for wall mounting.

The Palisade family of security fencing is designed to provide a formidable barrier against intrusion and theft. We manufacture using hot-formed and cold-rolled substantial steel sections. These sections offer increased strength and rigidity, and when combined with the long life span the product offers at a competitive price, it's easy to see why Paramount Palisade is specified at large installations all over the UK, Europe, Canada, New Zealand and the Middle East.

Common uses include railway and track protection, schools, colleges and universities, research laboratories, motorways and highways protection and utility companies such as electricity, gas and water.

Our standard product specifications for Palisade security fencing include panel widths of 2.75m wide. A typical panel would contain 17 pales per bay. Standard heights include 1.2m, 1.5m, 1.8m, 2.0m, 2.1m, 2.4m, 3.0m and 4.0m by special order.

Innovative British Fencing Solutions

Autocad Design

Our state of the art drawing office uses the latest in Autocad design ensuring both compatibility and accuracy with your individual site requirements.

UK Manufacturing

Paramount Steel Fence has manufactured in the UK since 1984. With over 30 years of experience we can provide secure solutions for use in most environments.

Long Life Cycle

All of our products are designed to provide the end user with years of trouble free service. We offer Galvanising, Pre treated systems, and Powder coating in any RAL colour within our product portfolio.

National Deliveries

Operating a national fleet of HGV vehicles including rigid lorries and articulated units, ensures we maintain fast and reliable distribution of our products around the UK.

The vertical pales can be supplied in different thicknesses, depending on what the client would like to protect and the risk of the fence coming under a sustained attack. We offer pale thicknesses of 2.0mm, 2.5mm and the more secure 3.0mm for our 'W' pales and 2.5mm, 3.0mm, 3.5mm and 4.0mm for our 'D' pales. The profile of the pale can be manufactured using either a 'W' Profile or 'D' profile depending on your requirements.

We offer a range of pale tops to deter climbing or jumping over the Palisade fence range. Clients can specify from a wide range of pale

tops, including our popular rounded top, rounded and notched top, single pointed top, triple point top or a straight top for use where climbing is unlikely. Our Palisade pales can be secured to the horizontal rails using either snap-off bolts, rivets or welding.

For safety, we do not recommend the use of Palisade security fencing at heights below 1.8m unless mounted on a wall or roof.

D Pale Rounded Notched

D Pale Triple Point

W Pale Rounded Notched

W Pale Single Point

W Pale Triple Point
